Summary

Cybersecurity engineer building **dieGO SIEM** from scratch in Go. **Elastic Certified Engineer** and **SIEM Analyst** with hands-on experience in SIEM operations, threat detection, and incident response using the Elastic Stack. Maintains a public writeup repository covering 25+ Hack The Box machines, read by 100+ users/month. Strong engineering background (Computer Science Engineer, GPA: 7.93, 6 Honors Distinctions) with Red/Blue Team perspective.

Skills & Certifications

- **Certifications:** Elastic Certified Engineer · Elastic Certified SIEM Analyst
- **Security:** ELK (Elasticsearch, Logstash, Kibana), SIEM, SOAR, MITRE ATT&CK, SOC, IOC, Red & Blue Team
- **Languages:** Go, Python, Java, JavaScript, Bash, NodeJS
- **Infrastructure:** Docker, Linux, Git, CI/CD, Proxmox, Nginx, AWS, Cloudflare
- **Spoken:** Spanish (native) · English (B2 Cambridge) · German (A2)

Experience

Cybersecurity Engineer Nologin – Zaragoza, ES Oct 2025 – present

- Operated Elastic Stack SIEM ingesting 200+ GB/day of logs from 20 sources. Built correlation, aggregation, and enrichment pipelines to detect and investigate security incidents across organizations
- Designed and deployed custom detection rules and alerting pipelines in Kibana, covering +30 use cases aligned with MITRE ATT&CK; contributed to reducing false positive rate by 20%
- Automated recurring SOC tasks (log parsing, alert triage, IOC enrichment) via SOAR and Python/Bash scripts, saving an estimated 10 hours/week of manual analyst work

Software Digitalization Engineer BSH – Zaragoza, ES Feb 2025 – Oct 2025

- Developed and deployed 15 internal Power Apps to digitalize production workflows and reduce manual processes by 80%

Education

Kiel University of Applied Sciences, Mobility Program Sep 2024 – Mar 2025

University of Zaragoza, Computer Science Engineering Sep 2021 – Jun 2025

- GPA: 7.93/10.0
- Awarded 6 Honors Distinctions

Featured Projects

dieGO SIEM – <https://github.com/841723/diego-siem>

- Developed a SIEM (Security Information and Event Management) system **from scratch using Go**, designed to collect, analyze, and visualize security-related data from various sources
- Built a **Docker-based** network simulation environment to test and validate SIEM detection capabilities across realistic attack scenarios
- Used ClickHouse for storing logs, PostgreSQL for storing metadata and React for the frontend, for monitoring and analyzing security events

Hack The Box Writeup Repository – <https://diego.rolданu.es/#writeups>

- Developed writeups for **over 25 Hack The Box machines**, detailing the steps taken to exploit vulnerabilities and gain access. Updated regularly to cover new machines and techniques
- Shared the writeups on a public repository to help **more than 100 people per month** learn and understand the techniques used in penetration testing and ethical hacking
